

RISHABH SHARMA

Vice President — Product Management · Fintech Platforms · AI Agents · Payments

Bengaluru, India · +91 70877 50777 · rishabh071106@gmail.com · linkedin.com/in/rishabh-sharmaimk · Open to Singapore relocation

Product leader with **15+ years** across global fintech, payments and banking platforms — **8+ years in product management** and **5+ years leading distributed product squads**. Currently **Vice President — Product Management at J.P. Morgan**, owning the global digital lending platform for CIB and CB clients with deep work in **syndicated lending, agency operations, real-time treasury and FX, platform APIs and partner onboarding**. Active builder of **agentic AI workflows** — from production loan-booking copilots to side-project agent stacks orchestrating LLMs, tool-use and voice models. Translates ambiguous market signals into scalable roadmaps, partners closely with engineering, compliance and GTM, and delivers measurable P&L impact in matrixed, multi-region environments.

CAREER ROADMAP

CORE COMPETENCIES

Product Strategy & Roadmap	GTM & ICP Enablement	P&L & Business Cases
Pay CORE Platform & APIs	Treasury, Liquidity & FX	Real-Time Payments & Wallets
Onboarding & KYC Platforms	Cross-Functional Leadership	Matrix & Multi-Region Ops
Agentic AI & LLM Orchestration	Syndicated Lending & Agency	Data, Metrics & Experimentation

PROFESSIONAL EXPERIENCE

Vice President — Product Management

J.P. Morgan Chase & Co. · Bengaluru, India · Jun 2020 – Present

- Own the **global product strategy and roadmap** for the digital loan booking & servicing platform serving Commercial & Investment Banking clients across **30+ countries**; defined the target-state architecture and led the shift from legacy COBOL/manual workflows to an **AI-native, agentic ecosystem**.
- Deep **syndicated lending** exposure: shaped agency-bank workflows on **Loan IQ** and **ACBS** covering deal setup, lender allocations, drawdowns, rollovers, interest & fee accruals, secondary trades and notices — directly transferable to multi-counterparty payment rails and treasury orchestration.
- Architected **API and Kafka integrations** with Loan IQ, ACBS and **12+ upstream underwriting and pre-booking systems** on AWS — the same orchestration pattern Thunes runs across its Pay CORE platform and partner network.
- Lead a cross-functional squad of **25+ engineers, product owners and data specialists** across India, US and EMEA; coach 4 PMs, run quarterly OKRs, sprint reviews and steering committees.
- Partnered with **Treasury, Liquidity and Risk** to model collateral, exposure and FX hedging flows; delivered controls that improved limit utilisation accuracy and shortened reconciliation cycles.
- Built the **partner onboarding platform** with country-specific KYC, AML and regulatory workflows; secured approvals across multiple jurisdictions and reduced onboarding lead time by **~40%**.
- Drove **Go-To-Market** for two new client segments — defined ICP, pricing tiers, sales enablement and rollout playbook with Marketing, Legal and Compliance; adoption rose from **40% to 85% in 12 months**.
- Delivered **~30% FTE optimisation** via AI/ML document extraction, intelligent routing and exception handling — established the platform as a strategic differentiator in the bank's global lending transformation.

Senior Consultant — Product & Platform Modernisation

Wipro Technologies (client: Standard Bank Group) · Johannesburg, South Africa · Oct 2011 – Jun 2020

- Led the **core banking and payments modernisation** programme for one of Africa's largest banks — designed the SAP-based target architecture and migrated **26 partner platforms** (mobile money, card schemes, agency banking, remittance corridors) into a unified ecosystem.
- Drove a high-impact **AML & compliance** initiative across **14 African markets**, hardening the bank's risk framework and cutting false-positive alerts by **~35%**.
- Managed a global delivery team of **38 developers, BAs and data specialists**; introduced Agile ceremonies and migrated the programme from Waterfall, lifting release cadence from quarterly to fortnightly.
- Partnered with enterprise architects on **API & integration strategy** for self-service channels, branch operations and **mobile money rails (M-Pesa, MTN, Airtel)** — the corridor DNA Thunes' Direct Global Network is built on.
- **6 years of international experience** across Sub-Saharan Africa with deep exposure to emerging-market payment behaviour and regulatory diversity.

AI AGENTS & WORKFLOW AUTOMATION

Hands-on practitioner shipping agentic systems — production at JPM and personal builds — across LLM orchestration, tool-use, retrieval and voice.

- **Agentic Loan Booking (JPM)**: multi-agent workflow where extraction, validation, KYC and covenant-check agents collaborate over a shared context bus; replaced ~30% of manual ops touchpoints and cut average booking turnaround from days to hours.
- **AI Document Intelligence**: orchestrated LLM + OCR pipelines with structured-output guards and human-in-the-loop review gates across CIB and CB lending — measurable accuracy lift on covenant and term-sheet parsing.
- **TaskFlow (personal build, 2026)**: a daily-routine app powered by an agent stack that plans the user's day, generates **chapter-wise book briefs**, **ElevenLabs voice affirmations** and **guided meditations**, and serves them through a streaming audio layer with a cache-warmup agent — calendar, wisdom and Mind Gym modules feed off the same orchestrator.
- **Tooling fluency**: Claude / Anthropic API, OpenAI, ElevenLabs voice, RAG with vector stores, agent frameworks (tool-use, function calling, MCP-style servers), prompt & eval harnesses, and product instrumentation for agent quality, latency and unit economics.
- **Product POV on agents**: evaluate agentic features on *task success, intervention rate, \$/successful task and trust signals* — not just demos; advocate for guardrails, observability and graceful fallbacks before scale-out.

SELECTED OUTCOMES & RECOGNITION

- Scaled JPM Loan Booking Platform adoption from **40% → 85% in 12 months** via React UI, embedded Tableau analytics and structured change management.
- Cut onboarding lead time by **~40%** through a workflow-driven KYC platform with country-specific rule packs.
- Delivered **~30% FTE optimisation** using AI/ML document extraction across global lending operations.
- Reduced AML false positives by **~35%** across **14 African markets** at Standard Bank.
- **JPM MVP Award (Q3'22), Team of the Quarter (Q3'24)**; winner — Wipro White Paper Contest on the Future of Software Testing.
